

I am strongly opposed to NPRM 01-278 re: SAVI Technologies
The introduction of unlicensed and incompatible Part 15 devices in
the 420-450 MHz band is inconsistent with current use of the 70 cm
band allocation now occupied by the Amateur Radio Service.
These devices would be better served by assignment to CURRENT frequency
allocations for Part 15 devices. The introduction of these devices
with high duty cycles could degrade and cause harmful interference on
the frequency segments now utilized by ARS for weak signal and EME as
indicated in the 70cm band plan. I urge the FCC to reject this proposal
as being inconsistent with current frequency allocations and not in the
public interest.
